

Sumsub Token Sharing Integration Guide

This guide outlines the essential operational steps and configurations for integrating Sumsub token sharing with your platform.

1. Setting up with Sumsub

- Reach out to Sumsub support to sign the **Copy Applicant** and **Reusable KYC** agreements
- Ask Interlace for a partner token
- Enter partner token here:

Donors Recipients

- Recipients are companies that you have agreed to share your verification data with.
- Once your partners are set up, you can test Copy Applicant and Reusable KYC in sandbox mode without a signed contract/agreement. To move into production testing, you'll need to have a signed contractual agreement in place.

+ Add recipient

Add recipient

Enter the partner token provided by the recipient company to add them to your sharing partners.

2.1 Verification Level - Critical Configuration

Navigate under integration, applicant level, and individuals

- **Uncheck** “disable automatic checks”
- Set “Data processing agreement” as **“Default”**

Steps

Configurations

Location settings

AML Screening

ID document settings

Advanced settings

Advanced settings

Configure advanced options including notifications, environment settings, and data processing preferences.

Source key 

Select option

Email notifications

Select options

Choose when applicants should receive email notifications based on their verification status.

Visibility configuration

☐ Level should only be available on production environment

Review settings

☐ Disable automatic checks

All automatic checks will be stopped. You'll need to review every applicant manually in the Applicants section.

Custom consent for data processing

Data processing consent

☒ Default

No extra consent link or text will be added to the consent screen.

☐ Link

Add a custom consent link for data processing to display on the consent screen.

☐ Text

Add a custom consent text for data processing to display directly on the consent screen.

2.2 - Setup of Verification Level

- Under Steps, ensure the following settings are aligned

Steps

Configurations

1. Applicant data
